Employment History

Feb 2026 – May 2026] **AI Engineering Intern, Growleads,** Built and optimized outbound automation systems for a B2B demand intelligence team. Researched emerging AI tools, supported internal product development, and developed AI agents to improve operational efficiency.

Sep 2025 – Mar 2026] **N8N Lead Generation Specialist Intern, BrightCanvas,** Designed n8n Lead Generation In A Box System for lead generation, data collection, enrichment, and outreach automation. Researched qualified prospects and prepared performance reports to improve automation workflows.

Dec 2025 – Feb 2026] **AI Automation Engineer Intern, Oqulix,** Developed an AI-powered automated content generator and workflow improvements for a VR product team. Supported AI-driven systems across healthcare, education, and immersive experience use cases.

Jun 2025 – Aug 2025] **UI/UX Designer Intern, SGCA Technologies,** Contributed UI/UX design, interface planning, and visual design support during a remote internship.

Projects

1] **Model Agnostic AI-OS v1:**

- Architected an Obsidian-based operating system that gives AI agents project truth, session history, corrections, and durable memory.
- Separated current status, reusable memory, corrections, and session archive so future agents know what to trust.
- Shipped a local-first v1 with vault structure, retrieval map, active handoff, closeout flow, backups, and setup scripts.

2] **Lead Generation In A Box:**

- Built an autonomous lead pipeline that turns a keyword into researched, enriched, and outreach-ready prospects.
- Scrapes relevant LinkedIn posts, profiles, and company context before drafting personalized outreach.
- Stores prospect history, pain points, enrichment data, and LinkedIn or WhatsApp drafts to avoid duplicated manual work.

3] **Content Engine v1:**

- Designed an autonomous content pipeline that converts raw context into strategy, platform-specific copy, and visual assets.
- Built the workflow around strategy-first generation so the engine plans message angle, audience, and platform tone before writing.
- Maintains persistent context, generated strategy, platform selection, and final outputs for consistent multi-platform content.

4] **The Art Of Building Skills:**

- Designed a model-agnostic framework for turning repeated AI workflows into reusable agent skills instead of disposable prompts.
- Defined the skill package structure around SKILL.md, scripts, references, and assets so agents load only the context they need.
- Documented a build process for capturing repeatable workflows, adding constraints and examples, then testing them on real tasks.

Education

2024 – 2028] **IILM University, Greater Noida,** Bachelor of Technology - BTech, Computer Science

2011 – 2023] **Lal Bahadur Shastri Smarak Jaym Sr School,** Senior Secondary Certificate, Computer Science

Skills

AI & Automation] Anthropic Claude Code, OpenAI Codex, AI Agents, Agentic Engineering, AI Automation (n8n), Context Engineering, Github, Reverse Engineering, Vercel, Backend Engineering, API's, Loop Engineering, Building Skills.

Operations & Product] Strategy Building, Operational Efficiency, Lead Generation, Outbound Automation, System Architect Designing, Inbound Automation, Scraping, Email Campaigns.

Certifications

Dice Acadmey, New Delhi] Complete Ui/Ux Design

Lets Upgrade] N8N Crash Course Automate Your Life With AI
